

JACKY YE

226-450-4729 | jacky.lh.ye@gmail.com | Toronto, ON | [LinkedIn Jacky](#)

PROFILE SUMMARY

Results-driven Data Professional with over 3 years of experience spanning **data science, advanced statistical modeling, and enterprise data engineering**. Jacky excels at transforming massive, unstructured datasets using ETL pipelines and extracting actionable insights using **Python, R, SQL, PySpark, Snowflake, BigQuery and Databricks**. Jacky also demonstrates a strong capability to leverage GenAI models and coding tools—such as **GPT, Claude Code, Codex, and Gemini**—to accelerate code development, NL2SQL, and optimize analytical workflows. A proficient data storyteller and collaborative analytics partner, Jacky seamlessly translates complex risk metrics, cross-border financial logs, and performance trends into interactive, automated reports using **Excel (Macros), Tableau, and Power BI** for enterprise stakeholders and executive leadership.

EDUCATION

Master of Applied Mathematics (Data Analytics)

Wilfrid Laurier University, **GPA: 3.8/4.0**

2024.09 - 2026.02

Waterloo, ON

Bachelor of Financial Mathematics

Wilfrid Laurier University, Awards: Entrance Scholarship

2019.09 - 2023.12

Waterloo, ON

WORK EXPERIENCE

Research Assistant | Wilfrid Laurier University | Waterloo, ON

2025.05 - 2026.02

- Engineered ETL pipeline for a national health survey of ~30K respondents, transforming raw multi-level clinical metrics into structured ordinal outcomes while maintaining 93% data retention.
- Built statistical models in **R** using national health data to calculate real-world trends, applying mathematical weights to ensure the sample group accurately mirrored the Canadian population.
- Developed custom PPO models to isolate unique threshold-specific predictors, removing the flawed assumption that risk factors impact health uniformly at every stage of decline.
- Validated model accuracy and controlled for reverse causation using block-wise nested controls and a multi-cutpoint binary logistic regression sensitivity check.
- Visualized and presented critical stage-specific relationships across key socio-behavioral risk factors—including sedentary habits, partner support, education levels, and alcohol consumption patterns—to distinguish correlates of impairment onset from clinical progression.

Data Analyst | Co-evolves | Toronto, ON

2024.09 - 2025.05

- Developed automated end-to-end data pipelines using Python, compressing the ingestion and processing timeline of complex insurance premium datasets for tier-1 carriers.
- Built and optimized **complex SQL validation scripts in DBT** to ensure data integrity for mandatory regulatory reporting, reducing compliance audit preparation time from weeks to hours.
- Developed client-facing dashboards in **Tableau**, enabling providers to visually analyze key operational metrics like premium volumes and broker retention rates.
- Used Postman and Python to test and validate **REST API** endpoints, writing error-handling logic to automatically catch connection timeouts and malformed JSON payloads.
- Conducted inferential tests and experimental design to analyze the impact of policyholder demographics, identifying key drivers of renewal probability.

Data Analyst | Harvest Fund Management | Beijing, China

2024.01 - 2024.08

- Built automated data validation scripts in Python to evaluate performance, risk exposure, and alpha generation across active mutual fund products against the CSI 300 Index and domestic benchmarks.
- Utilized **PySpark** to clean massive daily transaction logs and market feeds, wrote UDFs to correct missing stock prices, duplicate trade entries, and standardize inconsistent cross-border data formats.
- Worked with Portfolio Managers to streamline investor reporting, using SQL to pull transaction data and automatically generate clear, custom portfolio updates in **Excel** for institutional clients.
